## Selected Projects

---

### Fresh From Farm

- Created a database management system to store information about farmers, their products (crops), and customers. Through this system farmers can sell their crops to the customers. The project is done in three different aspects: Relational Database (SQL), NoSQL (MongoDB) and Graph Model (Neo4j).
- Performed data analysis to find significant insights and trends.

### Land Use Classification using Satellite Image Dataset (group project)

- Applied custom-built CNNs for land use classification.
- Applied transfer learning to fine-tune pre-trained networks such as AlexNet and ResNet.
- Performed extensive analysis for misclassified images per label, prediction accuracy per label etc.
