Relevant Projects

Fresh From Farm

○ Created a database management system to store information about farmers, their products (crops), and customers. Through this system farmers can sell their crops to the customers. The project is done by implementing Relational Database (SQL), NoSQL (MongoDB) and Graph Model (Neo4j).

Land Use Classification using Satellite Image Dataset

- Applied custom-built CNNs for land use classification.
- Applied transfer learning to fine-tune pre-trained networks such as AlexNet and ResNet.

Carry-over Effects in Interaction Fidelity: Impact of High-to-Low vs Low-to-High Usage

○ In this study, the influence of a high fidelity virtual reality (VR) interaction over a subsequent low fidelity virtual reality interaction and vice versa were evaluated.
